

Medi Jini Interface

Points to Consider

- In advance version we could consider rating or analysing how the recommendation are performing in terms of user interactions.
- Content based system should only be used in terms of new users once enough history of interactions are recorded we might shift to collaborative approach.

Enplan

Points to Consider

- Only to be used when enough user data is available.
- In here we assign a score system for each product based on its purpose.
- And we assign a score for each user based on there needs and interactions
- Then we perform cross product of two matrix to get results.
